

SFDR Article 6 Disclosure

Applicable to the following William Blair SICAV Fund:

- Absolute Return Currency Fund

A 'sustainability risk' means an environmental, social or governance event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of the investment. If a sustainability risk associated with an investment materialises, it could lead to the loss in value of an investment. Sustainability risks may vary from investment to investment and could include, but are not limited to social risks (including safety and human rights violations and exploitation), litigation risks linked to ESG issues, as well as the risk of political and regulatory changes on investments related to each of the foregoing. Sustainability risks are not systematically integrated into the Fund due to the nature of the investment objective of the Fund and they are also not a core part of its Investment Policy. The portfolio managers do, however, incorporate considerations related to the social and governance factors at play in countries in which they invest.
