William Blair SICAV Emerging Markets Debt Local Currency Fund

OBJECTIVE

Risk-adjusted returns

CHARACTERISTICS

The Fund seeks to provide risk-adjusted returns through investments in local currencies and local interest rates of emerging markets.

WHY CONSIDER THIS FUND?

- The historical yield advantage of emerging markets debt over developed markets debt provides the potential for attractive risk-adjusted returns.
- A combination of bottom-up and top-down expertise deepens our understanding of performance drivers, improving the decision making process.
- The breadth of the team allows for specialization and regional focus, enhancing our ability to identify opportunities and to avoid unattractive risks.

Please be advised that any return estimates or indications of past performance on this document are for information purposes only. Returns for periods of one year or more are annualized. All charges and fees, except any entry, exit and switching charge, have been taken into account in calculating the Fund's performance. Past performance is not necessarily a guide to future performance and no assurance can be made that the profits will be achieved or that substantial losses will not be incurred. The value of shares and any income from them can increase or decrease. An investor may not get back the amount originally invested. Where investment is made in currencies other than the investor's base currency, the value of those investments, and any income from them, will be affected by movements in exchange rates. This effect could be unfavourable as well as favourable. Levels and bases for taxation may change. Further specific risks may arise in relation to specific investments and you should review the risk factors very carefully before investing. Intended risk profile of the Fund may change overtime. The Fund is designed for long-term investors. For the most current month-end performance information, please visit our web site at sicav.williamblair.com.

2 Modified duration measures the sensitivity of a bond's price to changes in interest rates.

3 Active currency exposure is the difference between the portfolio and its benchmark's currency exposure.

4 Active duration exposure is the difference between the portfolio and its benchmark's duration exposure to a particular security or market segment. Effective interest rate duration is a measure of the sensitivity of a bond's price with respect to a shift in U.S. interest rates. It approximately measures the percentage change in a bond's price if U.S. interest rates change by 100 bps.

Option-adjusted spread (OAS) is a measure of the spread of a fixed income investment's yield relative to a benchmark, adjusted to take into account an embedded option.

Credit quality ratings are assigned to underlying securities in accordance with the methodology applied by the Fund's benchmark. The Fund itself has not been rated. Credit ratings are subject to change.

Information about the Fund's holdings should not be considered investment advice. There is no guarantee that the Fund will continue to hold any one particular security or stay invested in any one particular sector.

Holdings are subject to change at any time. Top holdings are shown as a % of total net assets.
